

About HELP

HIV Education & Learning Program (HELP) is an exclusive, free online resource providing ASOs/CBOs access to current, relevant HIV educational materials to share with their clients living with HIV.

HELP enhances **treatment education** activities in ASOs/CBOs through quality, current information to help improve health outcomes for people living with HIV.

Benefits of HELP to ASOs/CBOs

- Access to timely education materials developed by HIV treatment experts
- Utility of HIV education materials that are relevant and appropriate for ASO/CBO clients. Materials are available in a variety of formats
- Receive treatment education materials that are culturally competent and include materials for Spanish-speaking audiences
- Access to treatment information is free of charge; while ASO/CBO staff must select and repost materials, there is no cost or maintenance required of the ASO/CBO

How HELP Works

Organizations participating in the **HELP** program are interested in providing **HIV education** via their organization's website, HealthHIV's website, or another preferred online medium. Information can be delivered to participating ASOs/CBOs through an emailed link that organizations can place on their website or an email notification alerting ASO/CBO staff to the availability of new information on **HealthHIV's** website.

Providing HELP

HELP content focuses on topics such as:

- Current standard-of-care regimens;
- Newly approved drugs and changes in guidelines; and
- Detailed information on guidelines and how treatments work.

HELP promotes HIV education among patients, encouraging conversations with medical providers on current and developing HIV topics to facilitate enhanced medical care and quality outcomes for individuals living with HIV.

HELP provides treatment information in a variety of formats to ensure audience accessibility, easing the administrative burden on ASOs and CBOs. **HELP** is led by **HealthHIV**, in collaboration with the Discovery Institute of Medical Education, through an unrestricted educational grant from Abbot Laboratories.
